

SYN-HEP-002: A Synthetic Phase II Study of Investigational P

roduct HP-42

Protocol version 2.1 (synthetic document for software testing only).

Synopsis

This synthetic protocol describes an open-label study of the investigational product HP-42 in adults with metabolic dysfunction-associated steatotic liver disease. HP-42 is metabolised by the liver, so hepatic function and blood counts are assessed at screening. No real patient data is contained here.

Primary objective: change in liver fat fraction from baseline to week 48.

Inclusion Criteria

Participants must meet all of the following criteria:

1. Age 18 to 75 years inclusive.
2. Platelet count must not be below $100 \times 10^9/L$.
3. Hemoglobin of at least 10 g/dL.

Exclusion Criteria

Participants meeting any of the following are excluded:

1. ALT above 120 U/L.
2. Total bilirubin above 34 $\mu\text{mol/L}$.
3. Decompensated cirrhosis.
4. Pregnancy or breastfeeding.
